

ABSTRACT

BullGuess is the wild new kid on the blockchain — a 24/7, fully on-chain prediction beast where sharp minds and bold calls win big. No fluff. No chance. Just pure skill and instant on-chain rewards. Powered by \$BULLGS and launching on Base chain and other chains, BullGuess runs high-speed BTCUSD prediction rounds that turn precision into profit. Guess right, get paid. It's raw. It's real. It's decentralized.

Under the hood, it's all gas, no brakes: full on-chain finality, decentralized execution, and a deflationary token model — no middlemen, no misfires. With deterministic outcomes via oracle settlement, BullGuess is engineered to scale in one of Web3's fastest-growing verticals.

How fast? The decentralized prediction market hit \$1.4B in 2024 — and it's set to explode to \$95.5B within 10 years. What's fueling it? Disintermediation, zero-knowledge tech, and the rising demand for trustless forecasting tools across DeFi, governance, and macro markets. BullGuess is locked in at the center of this boom — bullseye pun very much intended.

More than a protocol, BullGuess is a vibe — where exchange mechanics meet SocialFi energy. Users don't trade assets. They trade conviction. Every correct forecast flexes status. Every bullseye tightens token supply.

And this is just the warm-up. BullGuess is expanding beyond BTCUSD into other major crypto assets — and soon into TradFi. Think stocks, gold, and other indexes. Think global. Add AI-powered prediction agents, and BullGuess evolves into the smart, scalable, cross-market forecasting layer for the next era of on-chain finance.

01 PROJECT OVERVIEW

1.1 THE CHALLENGE

Prediction markets are a perfect fit for crypto — but most miss the mark.

Why? Because they're clunky, centralized, or too luck-based. What we need:

- Skill > chance
- Fully on-chain and provably fair
- Rewarding the accurate, not just the active
- Fun, fast, and built for the Web3 crowd
- No middlemen, no fiat — crypto only

BullGuess takes this challenge head-on. It's not just another Web3 Dapp — it's a 24/7, skill-based, crypto-native machine for high-frequency forecasting and fun.

1.2 THE BULLGUESS SOLUTION

Here’s what makes BullGuess tick

SKILL-BASED WINS

Closest (or perfect) guesses take the prize.

SMART CONTRACTS FOR EVERYTHING

Pledges, payouts, all on-chain.

DEFLATION BUILT IN

Bullseyes burn tokens and reduce supply.

ENGAGEMENT LOOPS

Four daily rounds, share-to-earn, airdrops, and more.

1.3 PLATFORM STRUCTURE

BullGuess runs four BTCUSD rounds per day, all year, non-stop:

MOON ROUND

00:15–05:00 UTC (settles 06:00)

DAWN ROUND

06:15–11:00 UTC (settles 12:00)

LAMBO ROUND

12:15–17:00 UTC (settles 18:00)

DUSK ROUND

18:15–23:00 UTC (settles 00:00 next day)

During the open window, users submit their predictions. After the round closes, BullGuess grabs the final price via blockchain oracles and pays the winner instantly in \$BULLGS.

It’s fair, transparent, and moves fast — like crypto itself.

1.4 PREDICTION MODEL & PAYOUTS

CLOSEST WINS 90%

90% of the round pool (if no exact match)

BULLSEYE BONUS

Hit the exact BTCUSD price (2 decimals) and win all of the Mega Bonus pool

10% ROLLOVER

Adds to the BullsEye pool if no exact hit

TIEBREAKER

Prize is split if multiple users tie

DAILY AIRDROP

\$BULLGS every day

1.5 STAKING

Stake your \$BULLGS to earn guaranteed rewards and support the BullGuess ecosystem. Enjoy a fixed 100% APY—lock in early and grow your stake with confidence.

HOW IT WORKS

01

Lock \$BULLGS in the staking contract

02

Earn fixed 100% APY rewards—no dilution, no guessing.

03

Get rewarded for showing long-term conviction

WHY STAKE?

01

Passive yield, no predictions needed

02

On-chain, audited, transparent

03

Supports price stability + deeper platform engagement

1.6 BURN MECHANISM

When a user hits a BullsEye prediction, a burn event is triggered to reduce token supply and support long-term value:

- **BURN TRIGGERED**

Upon a BullsEye win

- **BURN AMOUNT**

2% of that round's total prize pool

- **HOW IT WORKS**

When a Bullseye hit triggers a burn, the protocol calculates 2% of the round's prize pool (in BULLGS), then burns that amount by permanently removing it from the protocol's reserve. This helps reduce total supply without affecting player rewards.

- **NOTE**

The burn comes entirely from the protocol — it does not reduce the winner's payout

1.7 ROADMAP

PHASE 1 - VISION & VALIDATION

Core concept & tokenomics

Smart Contracts

Private testing

PHASE 2 - BUILD & REFINE (NOW)

Beta testing

Smart Range tools

Smart contract audits

Web/Mobile app

PHASE 3 - LAUNCH & LIQUIDITY

Full launch

Listings & rewards programs

Viral growth via referrals & social tools

PHASE 4 - EXPANSION

Multichain rollout

NFTs & prediction streaks

TradFi markets (stocks, gold, indexes)

AI prediction agents

1.8 AI-POWERED PREDICTION AGENTS

BullGuess isn't just about human instinct — it's about giving users an edge. That's where AI-Powered Prediction Agents come in.

These on-chain agents use real-time market data, historical trends, and behavioral signals to help users craft sharper predictions. Whether you're a pro or just getting started, AI helps level up your forecasting game — without replacing your control.

How It Works:

MARKET ANALYSIS ON TAP

The agent scans live price action, volatility, and recent patterns to suggest intelligent BTCUSD predictions.

USER-CONTROLLED PARAMETERS

Choose how much AI input you want — go full-auto, hybrid, or just get a second opinion.

LEARNING OVER TIME

The agents evolve as the system collects more data, adapting to market changes and becoming smarter with every round.

Why It's cool:

- Reduces decision fatigue
- Helps new users forecast like seasoned traders
- Makes BullGuess more accessible, scalable, and sticky

TIME TO
PREDICT

 BULLGUESS

1.9 COMMUNITY

BullGuess grows with you — literally. Share your predictions, rack up streaks, refer friends, and earn \$BULLGS in the process.

Website <https://bullguess.com>

X @BullGuess

Telegram t.me/Bullguess

1.10 TEAM

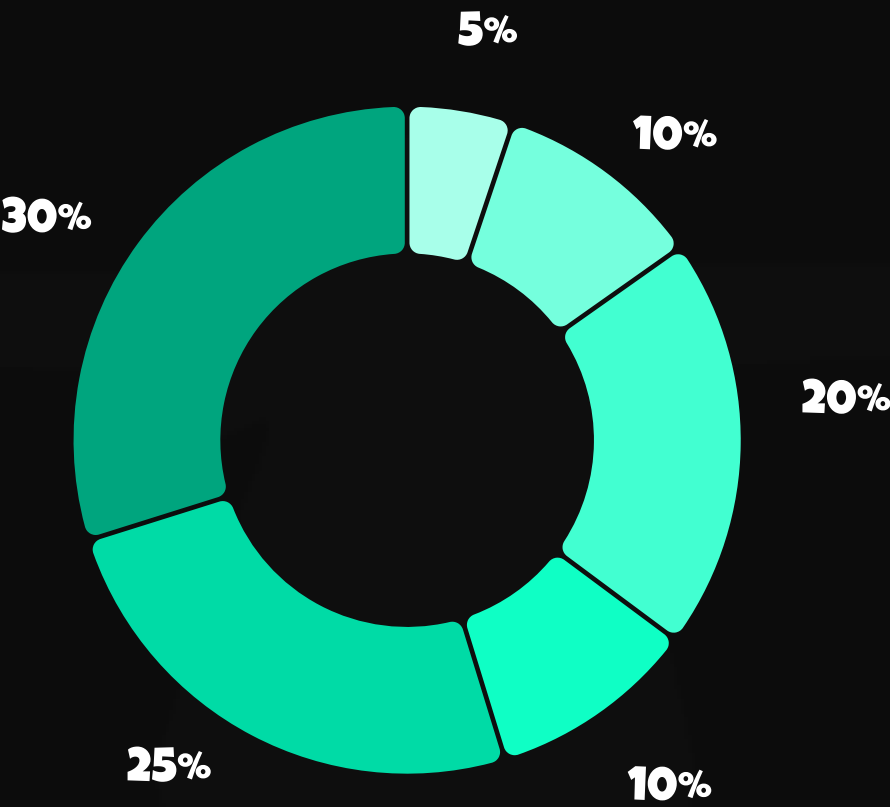

Built by a global crew of DeFi devs, blockchain pros, quant traders, and growth strategists. Backed by advisors across tokenomics, legal, and crypto marketing.

2 TOKEN ECONOMICS

TOKEN	TOTAL SUPPLY
\$BULLGS	1,000,000,000

DISTRIBUTION

- 30% Rewards
- 25% Marketing
- 20% Development
- 10% Exchange Listings
- 10% Liquidity
- 5% Treasury

5 RISKS & DISCLAIMERS

BullGuess is a blockchain-based prediction platform, not a betting, lottery, or gaming service. Participation involves risk, including:

01

Volatility – Crypto assets, including \$BULLGS, may experience large price swings.

02

No Guaranteed Return – Success depends on accuracy, not chance.

03

Illiquidity – Users may not always be able to sell tokens freely.

04

Regulatory Risks – Laws may change and affect availability in certain regions.

05

No Investment Protection – \$BULLGS is not covered by financial protection schemes.

06

Wallet Responsibility – Users must safeguard their wallets and private keys.

BullGuess is not intended for residents of jurisdictions that prohibit prediction platforms or token rewards.
